TARIFF FORMAT SHEET

1. **Page Numbering.** Page numbers appear in the upper-right corner of the page. Pages are numbered sequentially. New pages may occasionally be added to the tariff. When a new page is added, the page appears as a decimal. For example, a new page added between pages 34 and 35 would be 34.1.
2. **Page Revisions Numbers.** Page Revision Numbers also appear in the upper-right corner of the page. These numbers are used to determine the most current page revision on file with the Public Service Commission of South Carolina ("PSC"). For example, the fourth revised Page 34 cancels the third revised Page 34. Because of deferrals, notice periods, etc., the most current page number on file with the PSC is not always the tariff page in effect. Business Customers should consult with check sheet for the page currently in effect.
3. **Paragraph Numbering Sequence.** There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level of coding.
 - 1.
 - 1.1.
 - 1.1.1.
 - 1.1.1.A.
 - 1.1.1.A.1.
 - 1.1.A.1.(a)
 - 1.1.1.A.1.(a)(I)
 - 1.1.1.A.1.(a)(I)(i)
 - 1.1.1.A.1.(a)(I)(i)(1)
4. **Check List of Effective Pages.** When a tariff filing is made with the PSC, an updated Check List of Effective Pages ("Check List") accompanies the tariff filing. The Check List lists the pages contained in the tariff, with a cross-reference to the current revision number. When new pages are added, the Check List is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on the Check List if these are the only changes made to it (i.e., the format, etc.). Customers should refer to the latest Check List to find out if a particular page is the most current page on file with the PSC. Copies of all tariff filings and revisions will be sent to the ORS.
5. **Symbols Used in This Tariff.**

SECTION 3 - DESCRIPTION OF SERVICES, (CONT'D)

3.1. Telecommunications Services (cont'd)

3.1.8. Custom Calling Features

3.1.8.A. Service Offerings available to Customer's and End Users of Sage Spectrum's local exchange service on local access lines only, subject to availability from the central office serving the customer:

1. Repeat Dialing- Enables the customer to redial automatically the last outgoing telephone number. If the telephone number is busy, Repeat Dialing will keep trying to call the number for a maximum of thirty (30) minutes, beginning with the customer's activation of Repeat Dialing, in an attempt to establish the call. The customer will be signaled with a distinctive ring when the call can be completed. Repeat Dialing is available as a monthly plan or on a per use basis. Per use functionality is automatically provisioned on all lines. The customer may request to have Repeat Dialing taken off its lines.
2. Call Block - Enables the customer to block calls from pre-selected telephone numbers and/or the last incoming call (without knowing the number). To block specified telephone numbers, the customer builds a screening list of up to 31 telephone numbers. To block an unknown number after receiving a call, the customer enters a code to add the number to their screening list. If facilities are unavailable to provide incoming call screening via the customer's list, standard call completion will occur. Customers whose telephone numbers are blocked are directed to a recorded announcement.
3. Call Forwarding - Enables the customer to transfer all incoming calls to another telephone number within the exchange or on the Long Distance Telecommunications Network. The Call Forwarding customer is responsible for the payment of charges (e.g., toll charges) for each call between his Call Forwarding-equipped telephone and the telephone to which the call is being forwarded.

Includes Busy Line and Don't Answer features, as defined below. Customer may decline these additional features.

Call Forwarding - Busy Line allows incoming calls that encounter a busy condition to be forwarded to a pre-designated telephone number within the exchange or on the Long Distance Telecommunications Network.

Call Forwarding - Don't Answer allows incoming calls which are not answered after a pre-determined number of rings to be automatically forwarded to a pre-designated telephone number within the exchange or on the Long Distance Telecommunications Network.

3.1.8. Custom Calling Features (cont'd)

3.1.8.A. Service Offerings (cont'd)

4. **Call Return** - Enables the customer to redial automatically the last incoming telephone number. If that telephone number is busy, Call Return will keep trying to call the number for a maximum of thirty (30) minutes beginning with the customer's activation of Call Return in an attempt to establish the call. The customer will be signaled with a distinctive ring when the call can be completed. This service will not function if the calling party's telephone number has been Call Forwarded. Also, this service will not function from a line that does not have an associated telephone number, e.g., multi-line hunting groups. Call Return is available as a monthly plan or on a per use basis. Per use functionality is automatically provisioned on all lines. The customer may request to have the per use functionality taken off its lines.
5. **Call Trace** - Enables the customer to initiate a trace of the last completed incoming call by dialing an activation code before receiving another call. If a trace is successful, Call Trace will record the incoming call detail (not the conversation). A successful trace cannot be made if the incoming call originates in a central office not equipped for Call Trace service. The customer will not be provided the results of the trace (i.e., the telephone number traced). Such call detail may be provided only to law enforcement authorities upon proper request.

For further action to be taken, the customer is required to contact Sage Spectrum via the telephone number provided in the Call Trace announcement.

At its option or upon receipt of proper request from a law enforcement agency, Sage Spectrum will set up a temporary tracing arrangement using Call Trace or manual trap and trace where Call trace is not available at no charge to the customer when in the judgment of Sage Spectrum or law enforcement agency, the unwanted call(s) present a serious threat of bodily harm or destruction of property.

6. **Call Waiting** - Alerts a customer who is using his telephone that another caller is trying to reach him. Where facilities permit, Call Waiting subscribers may deactivate Call Waiting for the duration of one call. Call Waiting is automatically reactivated for the next originating or terminating call.

7. Call Waiting Deluxe - Allows customers to subscribe to a part of the Caller ID Deluxe Options service. When a person is already speaking on the telephone and receives another phone call, Call Waiting Deluxe service will allow for the display of the name and/or number of the new caller on the customer's CPE. This service allows the customer to decide if he wants to answer the new incoming call.

Call Waiting Deluxe is offered subject to the following limitations:

- a. Customers must also subscribe to Caller ID Name and Number.
 - b. Customers are responsible for furnishing their own compatible CPE, which should include the Caller ID capability necessary to display the calling party's name and/or number.
 - c. Available only where central office facilities permit.
8. RingMaster Service - RingMaster Service permits a customer to establish up to three telephone numbers on the same access line and to distinguish calls to each number by distinctive incoming ring patterns. The billing telephone number is the "master" number and the other telephone numbers are "dependent" numbers. The standard ringing pattern is provided for the master number while distinctive ringing patterns are provided for a maximum of two dependent numbers.

When a RingMaster Service customer subscribes to any Call Forwarding feature, dependent numbers can either be forwarded to the same number as the master number or receive no forwarding treatment at all.

When a RingMaster Service customer subscribes to Call Waiting, incoming calls to the master number will activate the standard Call Waiting tone. Incoming calls to the dependent numbers will activate a distinctive Call Waiting tone per dependent number.

The customer can construct or modify a telephone number screening list. Priority Call Ringing will screen incoming calls against the customer's list and provide the distinctive ring for telephone numbers on the list.
10. Remote Access to Call Forwarding - Permits the customer who also subscribes to Call Forwarding with the ability to activate, deactivate or change Call Forwarding from a remote location. Remote Access to Call Forwarding can only be accessed from a Dual Tone Multi-Frequency (DTMF) telephone which has a full set of characters, including "*" and "#". All charges incurred to access the remote number will be billed appropriately.

3.1.8.C. Repeat Dialing, Call Blocker, Call Return, Call Trace, Call Selector, Preferred Call Forwarding and Caller ID are functional when both the call originating customer and the call terminating customer are served from central offices capable of sending and receiving the Calling Party Number (CPN) and are linked by appropriate facilities.

3.1.8.D. Services with call forwarding capabilities (including Call Forwarding, Call Forwarding-Busy Line, Call Forwarding-Don't Answer) cannot be used on a continual basis to expand the local calling scope beyond that available to a customer's premise.

3.1.9. Caller ID Service - Display of Calling Number and/or Name on customer provided equipment. Available to Customers and End Users of Sage's local exchange service on local access lines only. Service includes:

3.1.9.A. Calling Number Delivery - Allows the transmission of Calling Party Number (CPN) to the subscriber's access lines. When a Calling Number Delivery equipped line is on-hook, CPN is transmitted across the line during the silent interval between the first and second ring.

3.1.9.B. Caller ID Deluxe - Enables the Caller ID subscriber to identify the calling party by a displayed name before the call is answered. The displayed name is the name associated with the CPN. 3.1. Telecommunications Services (cont'd)

3.1.9. Caller ID Service (cont'd)

3.1.9.C. **Anonymous Call Rejection** - Allows customer to automatically reject all calls that have been marked anonymous by the calling party. When ACR is active, the called party receives no alerting (ringing) for a call that has been rejected. The call is routed to a denial announcement and subsequently terminated.

3.1.9.D. **Calling Name and Number Blocking** - Any Sage Telecom calling party may prevent the delivery of CPN and of Calling Party Name to the called party by dialing an access code (*67 on their touch-tone pad or 1167 from a rotary telephone) immediately prior to placing a call. The access code activated per call blocking is available at no charge. If a calling party activates blocking, the CPN and Calling Party Name will not be transmitted across the line. Instead, the Caller ID subscriber will receive an anonymous indicator. This anonymous indicator notifies the Caller ID subscriber that the calling party chose to block name and number delivery.

Per-line blocking will be offered at no charge to a requesting customer if Sage Spectrum receives from the customer written certification that the customer has a compelling need for per-line blocking.

Caller ID subscribers must provide and connect their own compatible customer premises equipment (CPE) to process the Calling Number and/or Calling Name transmission.

Subscribers will automatically be provided with both Calling Number and Calling Name delivery, subject to availability in the central office that is servicing the subscriber. If the combination of the two is not available, the subscriber will receive whatever is available, either Calling Number OR Calling Name.

Caller ID features are subject to availability of facilities and compatibility with central office equipment (for both the calling and the called parties), access lines, and customer premises equipment.

Caller ID information will not be displayed under the following conditions: (a) if the called party is off-hook; or (b) if the called party answers during the first ring interval.

3.1.10.A. **Series Hunting** - The hunt for an idle access line starts with the called access line in a prearranged hunt group and ends with the last access line in the hunt group, completing the call to the first idle access line encountered. Unless the first access line in the hunt group is called, only a portion of the access line group is hunted.

3.1.10.B. **Circle Hunting** - Permits a **complete hunt over all the access lines in a prearranged access line hunt group**. If no idle access line is encountered, the hunting will continue until it reaches the access line that was originally called.
